

Project Type: K-12 Schools
LEED Rating System: New Construction

BALTIMORE CITY PUBLIC SCHOOLS

Lorax has been selected as the Prime LEED Consultant for the \$1.1 billion Baltimore City Public School Construction Program. The program includes the renovation or replacement of multiple city public schools to meet LEED standards.

Lorax will work hand in hand with Baltimore City Public Schools (BCS) and the Maryland Stadium Authority (MSA) to achieve, at a minimum, LEED Silver on all upcoming major renovations and newly constructed schools. Lorax has compiled a team of professionals to aid in the program's success.

With BCS and MSA's input, Lorax will develop program sustainability requirements, establish metrics and standards for LEED prerequisites and credits, and oversee the schedule of LEED milestones for each school project from feasibility through certification. Lorax will provide a single source of support to the individual school's project teams in relation to design and construction best practices, LEED interpretations and exceptions, standard plans and documentation forms, and construction management training. Lorax will act as a conduit of information sharing between the project teams, MSA, and BCS, as well as defining progress reporting requirements.
